

“Upstat” - analysis and improvement of managers' performance and development of business indicators using AI

Diploma project: *Maksutuly Ilyas*

Problem statement

Sales teams rely on daily conversations with clients,
but these conversations are rarely analyzed
in a structured way.

Managers make dozens of calls, yet:

- no one has time to review them
- mistakes go unnoticed
- coaching becomes inconsistent

As a result, companies lose potential revenue due to poor

Why is this a problem?

1. CRM systems show results, not communication quality
2. Call recordings exist, but are rarely reviewed
3. Coaching depends on subjective human evaluation
4. No scalable system for improving sales conversations

→ There is a gap between conversations and insights

Impact

Impact of the problem

1. Lost deals
2. Lower conversion rates
3. Inconsistent team performance
4. Ineffective training

Significance

This project is important because it addresses a critical gap in modern sales processes.

Today, companies collect large amounts of communication data, but lack tools to transform it into actionable insights.

UpStat provides:

- automated analysis of sales conversations
- structured coaching recommendations
- measurable improvement of communication quality

→ **This leads to better decision-making and higher sales performance**

Existing solutions

Several types of tools exist to address sales performance:

CRM Systems (e.g., Bitrix24, Salesforce)

- track deals and contacts
- show results, not communication quality

Call Recording Systems

- store conversations
- require manual listening

Conversation Intelligence Platforms (e.g., Gong, Chorus)

- provide advanced analytics
- expensive and focused on large companies

Aims and Objectives

Main Aim

To develop a web-based platform that automates the analysis of sales calls and provides structured coaching insights.

Objectives

- Implement call upload and transcription system
- Develop AI-based analysis of conversations
- Extract structured performance indicators
- Build dashboards for managers and owners
- Create a voice-based training module
- Integrate CRM data for deeper insights

Result: a working prototype of an AI-driven sales analytics platform

Academic research and commercial or empirical experiments (if applicable)

During the development of the platform, several practical tests were conducted:

Analysis of real call transcripts using AI models

Evaluation of generated coaching reports

Testing of training scenarios and user interaction

Validation of system outputs for consistency

Key Observations:

AI-generated reports provide structured and useful insights

Repetitive patterns in communication can be detected

Training scenarios help focus on specific weaknesses

→ **The system demonstrates practical applicability in real sales workflows**

Individual contribution

Maksutuly Iliyas's roles:

*Full Stack Developer
System designer
AI integration engineer*

The entire project was developed individually.

*Architecture and system design
Backend and database implementation
AI integration and analytics
User interface and dashboards
Testing and evaluation*

→ **Complete end-to-end development**

setings page

The screenshot shows the 'Настройки профиля' (Profile Settings) page. The left sidebar is identical to the analytics page. The main content area is titled 'Настройки профиля' and 'Управляйте своим профилем и безопасностью'. It contains three sections: 'Основная информация' (Basic information) with fields for Name (Valeon Second), Email (valeonstwo@gmail.com), and Phone number (87779892316); 'Фото профиля' (Profile photo) with a 'Выбрать файл' (Choose file) button and supported formats (JPG, PNG, GIF, max 5MB); and 'Безопасность' (Security) with fields for 'Текущий пароль' (Current password), 'Новый пароль' (New password), and 'Подтвердите новый пароль' (Confirm new password). A 'Сохранить изменения' (Save changes) button is at the bottom of the first section, and an 'Изменить пароль' (Change password) button is at the bottom of the second section. A user profile for 'Valeon Second' and a 'Выйти' button are at the bottom left.

Team member results

Conclusion

- UpStat was successfully developed as a working prototype
- The system automates sales call analysis and coaching
- AI enables structured insights from unstructured conversations

Future Work

- Improve AI accuracy and evaluation consistency
- Optimize performance and processing speed
- Enhance user interface and scalability

Key Contribution

- Transforms conversations into measurable data
- Supports manager improvement and team analytics
- Bridges the gap between calls and actionable insights
